A DIVISION OF BOURGAULT INDUSTRIES LTD.

LIQUID FERTILIZER CARTS

Available in three popular model sizes, the Free Form line of Liquid Fertilizer Carts provide a high quality product at a reasonable cost. They come complete with tank, trailer, tires and a drive kit. The customer has the freedom to source their own pumps and plumbing to suit individual needs. A manual disconnect drive is standard with an optional electric clutch offered.

The durable cone bottom tank features a minimal slope angle, which offers complete drainage with a low center of gravity for greater stability on uneven terrain. A unique, field proven gooseneck style hitch allows the tightest of turns. Free Form carts offer one common frame for all 3 models. This industry-leading feature allows you to upgrade in size!

SUPERIOR PRODUCTS AT AFFORDABLE PRICES!

The front end is engineered using the tried, tested and true design of the Bourgault Air Seeder. It allows a full range of motion along with outstanding durability. The large fifth wheel plate resists wear by utilizing a polymer wear pad. The front axle pivots on a lubricated pin and bushing system, which offers rugged, trouble free operation.

The LC series Liquid Cart frame is common throughout the models. This option allows the user to upgrade the cart's capacity by simply changing the tank. The frame design has undergone extensive field and endurance testing to ensure years of trouble free service.

Standard Features

- 10° cone tank for total drainage
- Heavy duty polyethylene tank
- 16" vented lid
- 2" banjo bulkhead
- Pump mount brackets
- Mechanical ground drive system
- Rear tow hitch
- Tow behind design
- Emergency rinse tank
- All weather flotation rear tires
- Soft Trac II flotation front tires
- Offset tracking reduces compaction
- Heavy duty 8" x 8" x .25" frame
- Two part baked polyurethane paint
- Transport safety chain
- HD "Bolt-on" rear axles

The mechanical ground drive system is "quick detach", has a spring loaded drive chain tensioner and features an adjustment bolt to allow the drive wheel chain and sprocket to remain tight.
