The Polytoon System allows customers to create a dock or platform of any shape and size. The decking is generally made from pressure treated wood because the Polytoon system's receiving slots are sized for regular dimensional lumber. Custom design your own dock system or have Free Form Plastics design it for you! Delivery to your location can also be arranged.

- Pictured at right is Free Form Plastic's durable and economical floating dock system. The heart of the system is the universal polyethylene float known as the "Polytoon". It was designed for supporting floating docks and platforms of any shape and size. The versatility of the Polytoon makes it the number one choice of dock builders everywhere.
