A DIVISION OF BOURGAULT INDUSTRIES LTD.

The High Tech Swath Roller!

Mounts on any 4 wheeled Swather!

Adjustable width to match the width of the swath!

FEATURES:

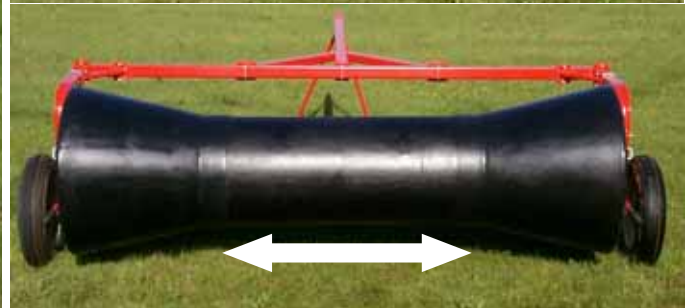

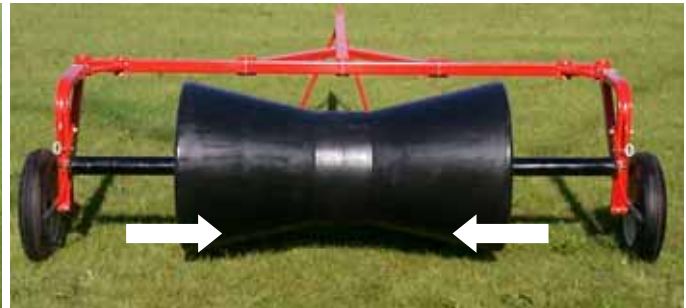

- Adjustable width from 6' to 10', to match the width of the swath
- Available in both trailer and mounted types
- Floating roller mode for effective firming in highly variable swaths.
- Quick and smooth height adjustment.
- Corrosion proof polyethylene roller.
- Heavy-duty construction for trouble-free operation.

A Small Item That Can Make a Huge Difference to the Bottom Line!

The Crop Loss Reducer!

Trailer Type

The quick height adjustment feature on the TB (Tow Behind) 2000 allows the operator to change the height of the roller quickly and easily. The floating roller mode allows the roller to automatically adjust to the different swath sizes. This feature will allow firming of swaths where it is often needed most... that is where the swaths are the lightest.

The MT (mounted) 2000 uses a winch and pulley system connected to a high rate tension spring to adjust the minimum working height of the roller. The winch adjustment allows the height of the MT 2000 to be set in seconds. Each cog of the winch translates into about 1/2" of height adjustment of the roller. The cable is attached to a heavy-duty tension spring to absorb shock loads encountered in the field or in transport. The result is smooth, bounce free performance. For transport, simply crank the winch handle several revolutions and your ready to go!
