

The Free Form Plastic Products cone bottom stands; complete with cone bottom tanks are a safe and efficient way to transport Liquid Fertilizer, water, etc to the field. With the minimal 10° cone tank slope the overall height is reduced which means increased safety. It also means less movement of the liquid inside the tank compared to one large tank or a tanker unit.

This complete drainage system means less maintenance. You don't have to worry about product being left in the tank. Optional 2" or 3" plumbing packages are available.

These trailer stands are designed to be secured directly to the trailer bed. In this particular case they are welded directly to the deck. This is ideal if the trailer is solely dedicated for this particular job. These stands are available to accommodate 1250, 1400, 1500, 2000, 2500 Imp. (1500, 1680, 1800, 2400, 3000 US) gallon cone bottom tanks. Tanks are available in white, black or Generation II style.
