

Free Form Plastic Products Introduces “The Great Truck Weight”!

Driving an empty pick-up truck in the winter has always been a challenge. Snow, ice and not enough weight in the truck box can make the road treacherous. Sandbags and unsecured weights are a hassle and can even be dangerous.

Finally there is a better solution... *The Great Truck Weight!*

BETTER RIDE !

BETTER TRACTION !

BETTER HANDLING !

BETTER BRAKING

BETTER SAFETY !

When the *Great Truck Weight* is filled with sand, it can add up to 450 lbs. of weight to the bed of a pick-up truck. This weight is invaluable for added traction, increased braking performance on ice, and a smoother ride.

The Great Truck Weight includes planks featuring an embossed gripping system that provides excellent footing when walking in the box. It can be purchased to cover the entire floor of the truck bed, or if less weight is needed, half of a system can be installed.

An Exploded View of the Great Truck Weight System

The *ease of installation* makes the Great Truck Weight attractive to anyone, handyman or not. There are minimal tools required for installation and the sand or gravel for ballast in the system can be found almost anywhere. The front and rear anchor beams are the base elements for the weight system that all attachments will securely be mounted to.

Molded from polyethylene, and filled with sand, the center planks slide into place for easy installation and removal. External holding straps easily bolt into the side and front of the anchor sections to securely tie the entire system together. The Great Truck Weight is molded to tailor fit each manufacturer's model of truck floor, ensuring a snug fit into each type of box.
